Subject **PD Forum Participation in Market Readiness Activities**

Dear Ms. Bosi,

Please allow me to introduce myself and the Project Developer Forum (PD Forum). The PD Forum is a collective voice which represents the interests of companies developing greenhouse gas (GHG) emission reduction projects in international markets. As Chairman, I am reaching out to you to share our concern and readiness to build upon existing mechanisms in the design of new market mechanisms as per the Cancun Agreement.

Noting the PMR's interest to facilitate meaningful participation of the private sector in its activities, we would like to inform the PMR Secretariat and the PMR Partnership Assembly that the PD Forum is willing and ready to contribute the experience and perspective of project developers in the context of PMR stakeholder consultation activities on the international and national levels.

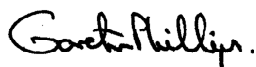

We feel that sharing and building on what we learned and experienced with CDM and JI is essential in the design stage of new market mechanism readiness activities in order to achieve practical and balanced results.

For this purpose, the PD Forum has assigned the coordinator listed below to facilitate the participation of interested project developers in consultation events organized by PMR Assembly members. We invite you to direct any related invitations - coming from the PMR Secretariat or Partnership Assembly members - to our coordinator who will organize the participation of a PD Forum member representative at the events.

Mr. Ingo Puhl
NMM Coordinator, PD Forum
i.puhl@southpolecarbon.com

Thank you. We look forward to working with you to advance new market mechanisms aimed at reducing global GHG emissions.

With best regards,

Gareth Phillips
Chairman of Project Developer Forum

About the Project Developer Forum:

The PD Forum is a collective voice which represents the interests of companies developing greenhouse gas (GHG) emission reduction projects in international markets. The PD Forum is made up of 45 members accounting for nearly 50% of all registered CDM projects and over one third of all CERs issued. Our goals are to:

- Improve the efficiency, legitimacy and functioning of the regulatory systems governing the development and use of emission reduction projects,
- Influence policy developments and regulatory standards related to emission reduction projects, and
- Update and support independent standards and codes of conduct in order to further improve the industry integrity.
